REPORT

Registration No	: 25BCY10189
Name of Student	: Shashank Shekhar Choudhary
Course Name	: Digital Literacy
Course Code	: CSE0001
School Name	: SCAI
Semester	: Winter Semester 2025-2026

Introduction

This project was developed as part of the Digital Literacy course, where I took on the role of a Student Digital Ambassador. The aim of this assignment was to understand and apply essential digital skills required in today's academic and professional environment. Through five structured tasks, I explored different aspects of digital literacy, including online presence, safe communication, use of digital tools, and awareness of cyber threats. Each task helped me gain practical experience by using real platforms such as GitHub, LinkedIn, and Google Forms. The project also emphasized responsible digital behaviour and professional communication. Overall, this assignment helped me build a strong foundation in using digital technologies effectively and safely, while also preparing me for future academic and career opportunities.

Task 1: Digital Literacy Awareness Infographic

For Task 1, I created a digital literacy awareness infographic using Canva. The objective was to design a one-page visual resource that explains the importance of digital literacy to students. My infographic covered key topics such as the definition of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I used icons, short text, and a clean layout to ensure that the information is easy to understand and visually appealing.

One of the main challenges I faced was selecting the most relevant content while keeping the design simple and not overcrowded. I learned that effective communication in digital formats requires both clarity and visual balance. Using Canva made the process easier as it provides templates and design elements, but organizing the content meaningfully still required careful thinking. This task helped me understand how visual tools can be used to educate others and present information in a concise and engaging manner.

Task 2: Student Digital Portfolio

In Task 2, I built my student digital portfolio by creating and updating profiles on multiple platforms including GitHub, LinkedIn, ResearchGate, and Stack Overflow. Each of these platforms serves a different purpose in building a professional identity. GitHub is used to showcase projects and technical work, LinkedIn helps in networking and professional visibility, while platforms like ResearchGate and Stack Overflow are useful for knowledge sharing and community interaction.

I created a GitHub profile README that includes my basic details and interests, and updated my LinkedIn profile with my education information. This task helped me understand the importance of maintaining a clean and professional digital presence from the early stages of my career. Over the next four years, I plan to regularly update these profiles by adding projects, participating in discussions, and connecting with professionals. This will help me build credibility and increase opportunities for internships and collaborations.

Task 3: Explore Coding & Collaboration Platforms

In Task 3, I explored coding practice platforms and cloud-based collaboration tools. For the coding part, I used CodeChef to solve a beginner-level problem. This helped me understand how such platforms are used to improve problem-solving skills and prepare for technical interviews. It also gave me exposure to structured coding environments and submission systems.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions, including multiple-choice and short answer types. I also connected the form to a Google Sheet to collect and analyze responses. This demonstrated how digital tools can be used to gather data and interact with a group efficiently.

This task showed me the practical importance of combining technical skills with collaboration tools. These platforms will be useful in academics for assignments, surveys, and group projects, and also in professional settings where data collection and analysis are important.

Task 4: Explore Coding & Collaboration Platforms

In Task 4, I learned the importance of professional digital communication by drafting formal emails and creating a social media checklist. A common example of poor communication is when students send unclear or informal emails to professors, such as messages without a subject line or proper greeting. This can lead to misunderstandings or delayed responses.

Such situations can be improved by following basic email etiquette, including writing a clear subject, using respectful language, and structuring the message properly. Through this task, I understood that professional communication plays a key role in both academic and workplace environments. The checklist I created also highlights responsible behaviour on social media, which is essential for maintaining a positive digital identity.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

In Task 5, I explored cybercrime awareness by studying UPI fraud and creating a prevention checklist. One thing that surprised me was how easily people can be tricked into sending money by simply misunderstanding how UPI requests work. Many users assume they are receiving money when they are actually authorizing a payment.

This made me realize the importance of understanding digital systems before using them. As a result, I will be more cautious while handling online transactions and will never share sensitive information like OTP or UPI PIN. I will also verify any payment request before approving it. This task increased my awareness of online threats and encouraged me to adopt safer digital habits in daily life.

Conclusion:

Overall, this project provided a comprehensive understanding of digital literacy and its importance in modern life. Through practical tasks, I learned how to create a professional online presence, communicate effectively, use digital tools, and stay safe online. Each task contributed to building essential skills that are useful in both academic and professional environments. The experience also helped me become more responsible and aware as a digital user. This project has prepared me to guide others in using digital technologies effectively and confidently.
